April 2, 2016

Mr. Sergio Marchionne  
FCA US LLC  
P.O. Box 21-8004  
Auburn Hills, MI 48321-8004

Dear Mr. Marchionne,

This is a plea from a fellow CEO. As leader of Good2Go® Auto Insurance, I've witnessed first-hand the dangerous consequences associated with distracted driving. With April being Distracted Driving Awareness Month and related accidents at an all-time high, I implore you to temper and control technological distractions in new Fiat Chrysler vehicles.

Distracted driving, such as texting or dialing a cell phone, is a major contributor to auto accidents in the United States. In fact, in 2013, 10% of fatal crashes and 18% of all injury crashes were caused by distracted driving. Worse, distracted driving contributed to 3,154 deaths and 424,000 injuries in motor vehicle crashes.<sup>1</sup>

Here at Good2Go® we prioritize our drivers' safety over all else. Our Cell Phone Safety Discount, which rewards drivers who install a text blocker in their car, is just one of the many ways we encourage safe driving practices. I am writing to ask you to join us in the fight against distracted driving rather than perpetuate the problem by adding more and more uncontrolled technology to new vehicles.

As a long-term marketing professional, I clearly recognize the attraction that a virtual car might have to consumers. Surely, Fiat Chrysler has the engineering savvy to make the benefits of "connectedness" available to occupants of the vehicle while protecting drivers from distraction. Unfortunately, I have instead found that Fiat Chrysler actually seems to encourage distracted driving through the touting of your Wi-Fi capabilities and standard Bluetooth.

These "connected" vehicles might have been made with passenger entertainment in mind, but in actuality they're drawing drivers away from the ultimate task, driving. Fiat Chrysler has offered models with Bluetooth technology standard for several years. But even using a hands-free device to control a cell phone can delay a driver's reactions as much as having a blood alcohol concentration at the legal limit of .08 percent. Whether the technology is hands-free or not, there is a significant, four-fold increase in accident potential.<sup>2</sup>

Wi-Fi capability is the latest technology being pushed by Fiat Chrysler. In 2015, Wi-Fi connectivity was available on 16 makes, including Dodge, Fiat, Jeep and RAM.<sup>3</sup> The technology, Uconnect, controls the vehicle's entertainment and navigation, enables phone calls, and even offers a Wi-Fi hotspot.<sup>4</sup> All of this interactive technology requires higher-level visual and audio functioning, which distracts the brain from the most important task, which is driving safely.<sup>5</sup>

It is imperative that Fiat Chrysler begins to prioritize the safety of its drivers over the attractiveness of technology as a selling feature. I hope you agree and take the actions necessary to help eliminate this epidemic. Help us combat distracted driving by intelligently managing all distracting technology on new Fiat Chrysler vehicles from this day forward.

Sincerely,

A handwritten signature in black ink that reads "Joe DeLago".
